

Digital Detective – Week 4 Report

Week 4: Detective and Investigation System

1. Detective Character Implementation

- The detective character was implemented in the game.
- A simple detective character was used as the main player.
- The detective can move around the investigation area.
- The character is used to explore the game environment and find clues.

2. Investigation System

- A basic investigation system was developed for the game.
- The player can move the detective near an object or clue.
- The **E** key is used to investigate a clue.
- When the detective is close to a clue, pressing **E** allows the player to interact with it.
- This system makes the game more interactive and gives the player a simple way to investigate the case.

3. Evidence Collection System

- An evidence collection system was added to the investigation process.
- When the detective investigates a clue, the clue can be collected as evidence.
- The collected evidence is stored in a simple evidence list.
- An evidence counter is also shown in the game.
- The counter helps the player know how many pieces of evidence have been collected.

4. Result

- The detective character, investigation system, and evidence collection system were developed for the Digital Detective game.
- These features provide the basic gameplay needed for investigating a case.
- The system was kept simple so that it can be improved with more investigation and evidence features in the later stages of the project.
